

# Exhaust pipes, accessories and heat insulation

As a »system supplier« for complete exhaust systems, we are happy to supply you with the necessary pipes for the integration of our exhaust purification products and silencers

## Exhaust pipes

We have the technical capability to pre-assemble entire exhaust pipe systems, from turbo flange to rain flap, in accordance with your specifications and deliver them to you as ready-to-install components. Naturally, we are also happy to pre-assemble pipes for intercoolers, coolant circuits or fuel supply lines.

### Benefits:

- Individual assembly of exhaust pipes, intercooler lines, coolant circuit lines and fuel supply lines
- Pipe diameters between 4 and 152.4 mm; also available as welded constructions with diameters up to 1,500 mm
- Band radii up to  $1.0/1.5 \times D$
- Different steel and stainless-steel qualities for various applications

### Accessories:

Additional we can offer you a wide range of flex pipes and accessories.

### This includes:

A wide range of

- flex pipes
- expansion joints
- clamp and flange connections
- clamps and vibration dampers, etc.

## PRODUCT OVERVIEW

Active DPF

Passive DPF

SCR-System

Muffler

Thermal isolation

Exhaust pipes

Catalysts

Spark arrester

Pipe Connection Technique

## Insulation:

We offer you individually pre-assembled thermal insulation for the thermal insulation of exhaust systems. As well as providing extremely effective insulation, the mats are highly flexible and are well suited to a variety of tasks such as insulating components that require regular maintenance. Our thermal insulation can quickly and easily be removed and reinstalled later.

Alongside individual assembly, the thermal insulation can also be manufactured with different material thicknesses up to 100 mm. Furthermore, the exterior fabric can be treated with a variety of coatings that, for example, can prevent oil or water from penetrating the insulation.

Depending on where the insulation is used and the ambient temperatures, the thermal insulation can be manufactured with a variety of fastening solutions. Suitable for all temperature ranges as standard, we supply thermal insulation with hooks and winding wire. It can also be fitted with hook-and-loop fasteners or snaps.

Thermal insulation: For the prevention of radiant heat in confined spaces
