

TFC-500

Filter cleaning system

The TFC-500 Filter Cleaning System is the ideal solution for quick, thorough particulate filter cleaning. Mounted on a trolley, the mobile TFC-500 can be used at practically any location and, if necessary, even directly on construction sites. The practical, lightweight design guarantees that the system is easy to operate and offers excellent cleaning results in just a short amount of time.

With the TFC-500, you can clean not only your TEHAG particulate filters, but also particulate filter modules from any other manufacturer up to a filter diameter of 400 mm and a filter height of 650 mm.

AT A GLANCE

- Trolley-mounted for mobile filter cleaning
- Simple, user-friendly technology
- Filter cleaning anywhere, any time
- Compact design
- Suitable for cleaning filter modules from any manufacturer
- Industrial vacuum cleaner with special filter bags for collecting waste material

The industrial vacuum cleaner generates vacuum in the container unit so that any waste material discharged from the filter element is immediately collected. The industrial vacuum cleaner's bags are custom designed to contain even the finest ash residue. Depending on the temperature of the ash, the bags can also be reused.

The bottom tank is illuminated to ensure thorough cleaning of the filter elements. This makes it possible to clearly see if ash residue is still coming out of the filter channels during cleaning. The durable construction of the TFC 500 makes it possible to use the cleaner both indoors and outdoors.

PRODUCT OVERVIEW

Active DPF	Muffler	Catalysts
Passive DPF	Thermal isolation	Spark arrester
SCR-System	Exhaust pipes	Pipe Connection Technique

The particulate filter of the equipment or vehicle can be cleaned directly on site.

To ensure optimal cleaning of the particulate filters while also complying with the legal regulations on cleaning particulate filters that are applicable in the country in question, mandatory procedures should always be observed during cleaning.
